SUMMARY

Data Science student at FAST NUCES Lahore with hands-on experience in Python, machine learning, and chatbot development. Passionate about artificial intelligence and building data-driven solutions. Skilled in data analysis, API integration, and AI automation.

EDUCATION

FAST National University of Computer and Emerging Sciences

Bachelor of Science in Data Science — 6th Semester

Lahore, Pakistan

Aug 2023 – Aug 2027

EXPERIENCE

Chatbot Development Intern

Jul 2025 – Aug 2025

Infotech

1 Month

- Built and integrated a prototype chatbot into client systems to improve user interactions and automate support workflows.
- Designed, built, and tested chatbot conversation workflows using APIs, ensuring reliable end-to-end performance.
- Collaborated with the client-facing team to gather requirements and iterate on chatbot responses for better user experience.

PROJECTS

Evidence-Based Hallucination Detection in LLMs

May 2026

Python, NLP, Retrieval-Augmented Generation, Semantic Similarity

- Developed a retrieval-augmented verification framework that generates LLM responses and retrieves supporting documents from a knowledge base to detect factual hallucinations.
- Applied semantic similarity techniques to compare model-generated output against retrieved evidence, improving the reliability and trustworthiness of AI-generated information.

Customer 360 – E-Commerce Customer & Product Analytics

May 2026

Python, Apriori, FP-Growth, K-Prototypes, Hierarchical Clustering, Gower Distance

- Applied association rule mining (Apriori, FP-Growth) and mixed-type clustering (K-Prototypes, Hierarchical with Gower distance) to the Olist Brazilian E-Commerce dataset to uncover product affinities and customer segments.
- Analyzed how product associations vary across customer segments, producing actionable recommendations for cross-selling, targeted marketing, and personalized customer experiences.

FinSync – Banking Application

Feb – May 2025

C#, .NET Core, MySQL

- Led the UI design of a full-stack banking application, crafting a clean and responsive frontend for a C#/.NET Core backend.
- Designed a relational SQL database to securely store user accounts, transactions, and tax records with ACID compliance.

TECHNICAL SKILLS

Languages: Python, C++, C#, Java, SQL

Frameworks: React.js, Django, .NET Core

Data & ML: Pandas, NumPy, Scikit-learn, Matplotlib, Seaborn, Apriori, FP-Growth
